

Hello!

My name is Ken, I'm a software engineer with **6+ years of experience**, working mostly in the front-end with **React/React Native** with Typescript and all sorts of state management libraries. I've often had to do backend work, mainly with **NodeJS** and the **Google Cloud Platform**, as well as some light DevOps, ensuring that our CI/CD pipeline ran all the appropriate **automated tests**. I've worked at **small startups** such as Auxetic, where I was the solo software engineer and eventually **led a team** of 3 other engineers, and larger corporations like **American Express, Cigna, and the NBA**.

Currently, I'm at Collectors, the parent company of [PSA](#), the household name for grading collectible cards. I serve as the **AI/ML** team's solo front-end engineer, taking **ownership** of an overlay that goes on top of our existing software. This overlay provides data and suggestions that assist our day-to-day operations, greatly **improving efficiency and accuracy**. I'm on a **patent** for this as well!

After working for several companies, I'm entering the job market now and focusing on finding the right company culture. I'm searching for a place full of **collaborative, serious, motivated** engineers, a company **motivated** by its mission, and a good work-life balance. I would love to learn more about life at your company! Thank you for considering my application. If you have any questions, please don't hesitate to reach out!

Thanks for your time,
Kenneth Tso
